It has been around for 30 years. In the mid-1990s, the development of the software program was split off and a new company was formed called Autodesk, Inc. AutoCAD was created by a group of software programmers and engineers led by Dr. Clayton Lewis and Charles Simonson. The original team consisted of Ken Kratzer, who led the software development, Dr. James Hughes who lead the system engineering, Chuck Garst who lead the system software engineering, and Ross Paterson who was responsible for technical marketing. When the original group split off to form Autodesk, Inc., the company was reorganized into two divisions: software development and product management. Autodesk, Inc. product development then began to focus on AutoCAD and ancillary products, and Autodesk Inc. software product management continued to focus on software development. Autodesk Inc. software development has since been responsible for several key technologies, including the core software framework for AutoCAD. The founding employees were given a minority stake in the company. In 1997, Robert Irizarry joined the company and became Autodesk's president and chief executive officer in 1999.
