.NET was used in AutoCAD Cracked 2022 Latest Version 2011 and 2012 and as a cross-platform API. AutoLISP and Visual LISP are used for command-line scripting. History In 2003, Autodesk released a web-based product called DesignCenter which was based on the ACE (AutoCAD Engineering) platform. ACE was based on an ObjectARX engine that could be used to add AutoCAD functionality to other applications, including the Microsoft Windows environment. In January 2004, Autodesk re-released DesignCenter as Autodesk eCenter which provided similar functionality to the original DesignCenter. Autodesk subsequently replaced ObjectARX with an SDK which allowed third parties to write extensions for AutoCAD. In January 2005, Autodesk replaced the DesignCenter/eCenter with AutoCAD Civil 3D. AutoCAD Civil 3D uses the same SDK to enable third-party developers to write AutoCAD extensions. Civil 3D was originally released as a Windows application, but was eventually ported to Mac OS X in 2011 and released under the name Autodesk Revit. Autodesk replaced Civil 3D with AutoCAD Architecture in 2009. AutoCAD Architecture was released for Windows in May 2009. The architecture of AutoCAD Architecture had previously been used in Autodesk AutoCAD, but the earlier version lacked some of the features of AutoCAD Architecture. For example, AutoCAD Architecture can create cross-cut and section views based on the relationships of objects, whereas AutoCAD can only use these views to view the objects. AutoCAD Architecture also can perform more complex operations such as changing the properties of 3D objects, text or 2D lines. The final release of AutoCAD Architecture for Windows included Revit, Architectural Desktop, AEC Design Tools and more. AutoCAD Architecture was also released for Mac OS X in May 2009 as AutoCAD Architecture 2010. In 2010, Autodesk launched the Autodesk Exchange Apps. Developers use the Apps to create add-on applications for Autodesk software. AutoCAD Architecture was one of the first apps included in the Autodesk Exchange Apps. In July 2012, Autodesk released AutoCAD 2012. The application uses Microsoft's.NET framework to create new and edit existing objects, view the objects and edit the drawings. Other capabilities of AutoCAD 2012 include importing and exporting.DWG,.PDF and.DGN files ca3bfb1094
