What is missing from Photoshop is a tool to preview images prior to resizing. You either had to do that manually or use the “resize and save” command for resizing. Of course, you could also pick up a third-party tool, such as Gimp, but if you’re serious about your design, you would probably pick up Photoshop. There are tools mentioned in the free version of Photoshop and in Lightroom which are on par with Photoshop’s resizing, but nothing which beats Photoshop in terms of functionality. It’s been my experience that when you’re doing serious editing – for example, resizing, retouching, filling in a missing object from another photo, or applying special effects – resizing is one of the most time-consuming tasks. So, I love that Photoshop gives us the option to resize and preview simultaneously. Other changes include a new Workflow option that lets you choose which tool you’d like to open when you press Shift + Command + W (except when opening a saved Photoshop file, which still uses the previous method). You can also opt for word wrapping or no wrapping in the files being opened. For those of us who often work offline, I believe it makes sense if you’re prone to repetitive actions that you would rather not repeat. In the last few days I have been also trying to use Lightroom 5.1.0 on my Mac, but the preview of this Nikon D800JP2Sample RAW file just doesn’t work. It’s very slow (slower than Photoshop). I don’t know if there are any other RAW files available on RAW.sonstube.com, but I would be interested in knowing what you people think.

The feature updates that were announced today at MAX follow a year's worth of enhancements to Photoshop that introduced exciting new ways to work with images, like Content-Aware Fill. Today's announcements are focused on the next generation of Photoshop, with innovative new approaches to editing across complex surfaces like tablets and mobile as well as the web. Some of these innovations include Share for Review, a new way to seamlessly share and collaborate on projects, and new features for editing on the web. Adobe has also created a new Creative Cloud experience for the web, with a new grid of tools that make it easier than ever to create and edit in real time. Another major announcement was the integration of the Adobe Sensei AI with Photoshop, which makes it possible to make some tools in Photoshop less cumbersome in an editing session. This is done with the new one-click Delete tool and the Delete and Fill tool. No more pixel-by-pixel to delete a puncture on the nose, rather you can select a circle around the largest puncture with the Content-Aware Fill tool and change the color.
