Adobe has just rolled out a new beta version of Photoshop CS5.9 that adds a new selection mode called "Smart object," which now allows you to select only those details you want to edit in resolution-independent screen space, while retaining control over things like miscellaneous fills and special purpose paths. The "Rulers" palette, a key addition to the program for decades, has been redesigned to highlight new ruler locations, auto-fit margins, and color-coded options. Other new features include a "Switch Reference" up-time setting that locks you in to a reference resolution; a new "Go to Layer" panel to help you find your way around while working; and a new "Wayback" mode that helps you undo and go back a step when you go too far into an editing process. Photoshop CC has a small but nice set of built-in brushes. The design team made sure that each brush has at least 50 different presets. Photoshop CC even includes the Power Stroke, the industry standard radial gradient brush with no subscription cost. But some other pre-packaged brush choices that feature premium brushes from top designers like Patrick Allen, Kenney Grayson, and Josh Hicks are also available for \$1.99 each.

When you wake up in the morning, you're in the perfect creative state of mind. Whether you wake up early or late, when you're in that zone, there's something about the light that makes it just so much easier to get the creative spark going. The way the sun shines, the city lights come on, or a street lamp comes on, the light has a particular magic. Light gives life to things. It free's our senses. It inspires us. But no matter how inspired you are, there's so much more to photography than that. Lighting, exposure, sharpness, color, and more are all part of the puzzle. There's no one way to create a great image; it's so much more than just pushing a button. That's one of the challenges with a camera. It takes lighting expert Michael Reichmann to capture the fantasy world of a photo. But the fact is, he's just one person helping bring your creativity to life. L'Oreal, Henry Ford Hospital, and Lowry's Drugs also asked Michael to help bring the magic to life. And guess what? None of them looked quite the same after he was done. They all looked like magic—and that's what's possible with Photoshop. It's really a tool for any kind of magic...and that's not all. There's even magic for those who can't make up their own magic. Michael and Lightroom expert Maika Zibben share their expertise in video to show how Photoshop can become your own personal photo stylist. The video is proof that magic happens when you put the right people together and give them the right tools.
