System Requirements: OS: Microsoft Windows XP, Vista, 7, 8, 10. CPU: Intel Pentium IV, AMD Athlon, AMD K6-3, 2GHz or higher. Memory: 256 MB RAM. Disk space: about 20 MB. Main features: Fast detection of PDF files: one of the most impressive features of this application is the speed it works at. You are provided with various options to upload a folder or a list of PDF files, to which you can add keywords, tags or categories, as well as a special option that will remove words, pages or even the whole file. Once you add all this information to your accounts, the software will do its magic. Depending on the way you upload the files, the whole process can be done in a matter of a few minutes. Furthermore, it is also possible to generate different reports, including an analysis of words, words per page and pages. Smart filtering: all files can be imported to a database, and all reports generated on the basis of that data. The option to select files or add tags allows to filter all detected files according to their parameters. Grouping files: all files can be sorted according to the parameters you want to see in the report. Export the selected files to the clipboard: the files you want to export can be copied to the clipboard in order to be moved to another system. Validate PDF files integrity: using this option, you can scan all PDF files (without having to open them) and locate their errors, including font and character encoding, as well as validate the origin of the file and find out what issues you need to resolve.
