Since its release, it's become a go-to filter when you want to create a specific type of effect. For example, in Photoshop, you can create an image texture, or even create an image that looks like a poster or wall art. Previously, you would have to create a new layer to do just that. On the other hand, you can now apply Layer Compound Shape. This is considered to be a more refined, yet simpler filter to use. Q: UIViewAnimation block not executing in UIKit or SpriteKit I'm attempting to warp a node (spritekit object) with the following animation code: SKAction *rotateAction = [SKAction rotateByAngle:1 duration:3]; self.moveNode = [SKAction animateWithDuration:1.0 timePerUnit:0.01 completionBlock:^(BOOL finished) { SKAction *finishAction = [SKAction removeFromParent]; finishAction.timingMode = kCMTTimeScaleOut; [SKAction sequence:@[moveNode, rotateAction, finishAction]]; }]; (moveNode is a spritekit node. as the node is moved, the above code is being called.) this code is being called in a cell for the first time in the game and is not executing. I've stepped through the code, the complete block never gets called. not exactly sure what i'm doing wrong. A: as Skobbler said in the comments, the code is never actually invoking the block block is being invoked by the model once the first rotation completes. The model is itself running code while the block is running, but the blocks illustrate exactly how to run a sequence of SKActions within a single SKScene/SKView. for each animation, the code must be placed in a block that is then passed to the SKAction.sequence method. the block calls removeFromParent when it is finished. the completion block passed to animateWithDuration:timePerUnit:completionBlock: is encased in another block: the completion block as in the answer to this question. чат, чтобы у Льва Беркаша не было времени гулять», - отмечает Виктор Кашин.
