Photoshop is awesome.. the tools are great, the workflow is genius.. and the price is pretty cheap, especially if you compare that to the alternatives. I highly recommend this program to everyone.. Who needs Photoshop Lightroom? Yes, it is very fast. Yes, it has solid editing tools. But if you work with large volumes of JPG's, then you may struggle with its file size limiting and compression options. Also, PSD files can become unwieldy when you work with large volumes of files. - **1. Customer satisfaction.** Stakeholder satisfaction with a product is one of the most critical aspects of selling a product. It helps product managers understand the changes they should make and it helps sales managers see the way stakeholders would rate the overall experience with their purchase.
- **2. Price.** How much does a product cost? A product's price can be more important than its features. It's no good selling a product for a lot of money if it's not any good.
- **3. Quality.** How good is a product? Is it made well? How easy is it to use? How reliable is it? Does it work with other software? How easy is it to fix, and will it fix itself?

They are no longer adequate with the growing demands of 3D in publishing and design workflows, and introduce systematic checkerboard artifacts and issues with rendering 3D content. Photoshop's new Native APIs, together with the newly released, stability-oriented 3D API, allow for seamless navigation across physical and virtual scales of dimensions. Studios and brands are creating content in native 3D using these new APIs, and shader-based applications are being developed which natively support 3D APIs.
